CAREER OBJECTIVE

Computer Science student focused on Machine Learning Systems and Applied AI. I build end-to-end ML applications involving real-time inference, explainability, retrieval pipelines, monitoring, and adaptive retraining workflows.

TECHNICAL SKILLS

Programming Languages: Python, SQL

AI/ML: Machine Learning, Deep Learning, Anomaly Detection, Drift Detection, Model Monitoring, Model Calibration, Experiment Tracking, NLP, Transformers, HuggingFace

Frameworks & Libraries: PyTorch, Scikit-learn, FastAPI, Flask, Pandas, NumPy, Matplotlib, Pydantic, SHAP

MLOps: MLflow, Evidently AI, CI/CD, GitHub Actions

Infrastructure: Apache Kafka, Docker, AWS EC2, Redis, PostgreSQL

PROJECTS

RealSignal - Real-Time Anomaly Detection System | Live Demo | GitHub May 2026

- Built a Kafka-driven fraud monitoring system processing 5000+ streaming transactions with Isolation Forest inference.
- Reduced false positives by 97% (1261 to 36) through feature stabilization and threshold calibration.
- Implemented PSI-based drift detection with automated retraining workflows across 4 behavioral features.
- Integrated MLflow tracking for experiments, drift artifacts, and retraining observability.

PathwayIQ - Hospital Readmission Intelligence System | Live Demo | GitHub May 2026

- Built an explainable readmission prediction system using calibrated XGBoost and SHAP on 100K+ records.
- Developed an ML pipeline with FastAPI inference APIs, drift detection, retraining, and artifact versioning.
- Reduced Brier Score by 56.9% (0.2163 to 0.0931) using isotonic regression calibration.
- Deployed a containerized ML system on AWS EC2 using Docker and GitHub Actions CI/CD.

MeetSync - AI Meeting Minutes Generator | Live Demo | GitHub March 2026

- Built an async meeting intelligence pipeline generating structured summaries and action items from audio.
- Reduced queue latency by 76% (24.7s to 5.9s) through concurrent worker scaling and load testing.
- Identified queue scheduling as the primary bottleneck while maintaining 6s processing time under load.
- Improved reliability using exponential backoff, retry handling, and structured API failure tracking.

RELEVANT COURSEWORK

CS224N: Natural Language Processing with Deep Learning Stanford University

- Studied transformer architectures, attention mechanisms, embeddings, and modern NLP modeling techniques.
- Worked with sequence modeling, language representation learning, and neural NLP pipelines.

Data Science Bootcamp Pregrad

- Covered RNN fundamentals including sequence modeling, LSTM, and GRU architectures.
- Examined training dynamics including overfitting, regularization, learning rate tuning, and validation metrics.

HACKATHONS & ACHIEVEMENTS

- **Hack The Box Global Hackathon:** Selected as one of **4 teams** representing Galgotias University for the global cybersecurity hackathon hosted by YNOV Campus, Paris.
- **Hackaccino 3.0 National Hackathon:** Developed a data-driven women's safety platform predicting area-wise risk levels from historical crime datasets; secured **17th place out of 194 teams**.
- **NASA Space Apps Challenge:** Built an interactive educational web platform in a team to simplify exoplanet science for ages 5–15, translating exoplanet concepts into engaging visual explanations.

EDUCATION

Galgotias University
B.Tech in Computer Science and Engineering

Greater Noida
2023 – 2027
